Profile

Frontend-Focused Full-Stack Developer with 4+ years of expertise building, optimizing, and scaling responsive web applications. High proficiency in React.js, Angular, JavaScript, HTML5, and CSS3, combined with robust backend capabilities in Node.js, Express.js, and MongoDB (NoSQL data modeling and aggregation). Adept at integrating modern AI capabilities (LLMs, predictive analytics, and intelligent automation) into frontend architectures to enhance user decision-making. Skilled in leveraging AI-assisted engineering tools (GitHub Copilot, Claude, ChatGPT, Cursor) to accelerate development cycles and optimize code quality. Expert in UI frameworks (Tailwind CSS, Bootstrap, Material UI, PrimeNG), state management (Redux), and server-state synchronization via React Query, with additional experience in ASP.NET MVC environments to ensure seamless full-stack integration.

Professional Experience

Frontend Developer, Truckoom Technologies 📄

05/2023 – Present
Dubai, UAE

Developed a Cutting-Edge Fleet Management Dashboard: Spearheaded the full-stack, frontend-focused engineering of a modern web dashboard for Truckoom, a fleet technology platform designed to empower fleet managers with real-time operational control. The dashboard streamlines complex logistics workflows, connects with scalable Node.js backend services, handles heavy database streams, and reduces operational costs for enterprise logistics management. Built & Maintained Major System Panels:

- **TMS Panel (Transport Management System):** Designed the core interface for dispatchers to manage trips, vehicles, and drivers, ensuring seamless integration with secure backend RESTful APIs and Express services.
- **Customer Panel:** Created an intuitive client-side dashboard allowing users to place orders, track deliveries in real time, and interact with support teams.
- **Back Office Panel:** Developed the administrative panel for internal staff to manage billing, structured reports, NoSQL database analytics, and overall platform oversight.

Truckoom V2 Upgrade (Modern Rebuild): Led the engineering of Truckoom V2, a fully enhanced and modernized version of the platform rebuilt using Angular and PrimeNG. Improved full-stack application architecture, enhanced server-state synchronization, and optimized database-to-UI frontend performance while introducing a scalable design system. Technology Stack & Workflow:

- **Languages & Frameworks:** Angular, JavaScript, HTML5, CSS3, Node.js (understanding/exposure)
- **Databases & Architecture:** MongoDB, NoSQL data structures, MVC (Model-View Controller) design pattern for clean full-stack data separation
- **Styling & UI:** Tailwind CSS, Bootstrap 5, PrimeNG for advanced enterprise UI components
- **AI-Assisted Engineering:** Actively leveraged advanced AI tools (Claude, ChatGPT, and Cursor) within the daily development workflow to accelerate coding cycles, optimize code quality, and automate routine tasks
- **Version Control & CI/CD:** Git, Microsoft Azure DevOps for source control, CI/CD pipelines, and automated deployment

- **Project Management & Communication:** JIRA for agile sprint management, Slack for cross-functional collaboration

UI/UX Design & Optimization:

- Created highly reusable UI components and layout templates to ensure design consistency and accelerate full-stack development cycles
- Focused on web accessibility (WCAG), cross-browser compatibility, and responsive design across all devices and screen sizes
- Optimized frontend performance and client-side data parsing logic for handling large-scale logistics datasets and real-time backend updates

Cross-Functional Collaboration:

- Worked closely with core backend developers and QA engineers to integrate REST APIs, map MongoDB collections to client states, and ensure seamless data flow
- Actively participated in agile sprint planning, technical demos, and stakeholder meetings to refine features based on technical feedback

Frontend Developer, Saffran Labs	07/2022 – 03/2023 Lahore, Pakistan
Frontend Developer, Sani IT Consultant	04/2022 – 06/2022 Lahore, Pakistan

Education

Bs (Computer Science), Virtual University of Pakistan	04/2022 – 2026 Lahore, Pakistan
--	------------------------------------

Freelance Projects

Padel AI Web Application

- **Designed and Implemented Padel AI Web Application:** Developed a responsive, high-performance web platform utilizing React.js and React-Bootstrap to deliver real-time AI-powered analytics, shot tracking visualizations, and interactive match insight data to users.
- **Integrated LLMs and Advanced AI Features:** Connected frontend application components with backend LLM architectures and predictive analytics endpoints, giving users tailored AI coaching feedback, automated performance highlights, and conversational video game breakdowns.
- **Leveraged Modern React Architecture:** Architected scalable codebases using advanced React features including Hooks (useState, useEffect, useContext), React Router for seamless single-page application navigation, and a reusable component layout structure to optimize developer velocity.
- **Optimized Rendering & Performance:** Engineered smooth client-side animations and refined frontend execution logic to flawlessly render complex computer-vision heatmaps and high-frequency player telemetry datasets without lag.

Scanzilla Web Application

- **Architected the Scanzilla Web Ecosystem:** Developed and scaled a high-throughput responsive web application using React.js and React-Bootstrap, designing the client layer to smoothly parse and visualize large datasets from backend data pipelines.
- **Engineered Conversational AI Interfaces:** Implemented dedicated frontend components that connect to Large Language Models (LLMs), enabling users to naturally query complex scanning data and receive intelligent, real-time automated summaries.
- **Mastered Modern React Architecture:** Created a highly maintainable, component-driven codebase leveraging React Hooks (useState, useEffect, useContext) and React Router, optimizing how server-side data models sync with the UI state.
- **Drove Velocity via AI-Assisted Engineering:** Utilized modern AI systems (Claude, ChatGPT, Cursor) to rapidly build out complex layouts, debug cross-browser rendering bottlenecks, and inject fluid CSS animations for an engaging user experience.
